

Assignment 2: Stage II-Analysis

Directions: Using the table below as a guide, you are going to generate requirement to satisfy the Tables, Queries, Forms, Report and other functions that must be in your access database. Your requirements should be clear and concise.

Items	Description	Requirements
Tables	Must have at least 3 tables.	✓ The DBMS shall track all driver records in the Drivers table. ✓ The DBMS shall track all manager records in the Managers table. ✓ The DBMS shall track all driver incident records in the Incidents table. ✓ The DBMS shall contain different types of violations listed in the Violations table.
Queries	- Must have at least four single-table queries. - Must have at least four multi-table queries. - At least two queries should have conditions.	Single-table queries: ✓ The DBMS shall have a query to list all managers with their contact information. ✓ The DBMS shall have a query to list all drivers with their contact information. ✓ The DBMS shall have a query to list all drivers hired in the 6 months. ✓ The DBMS shall have a query to calculate the average total mileage of all drivers. Multi-table queries: ✓ The DBMS shall have a query to list all drivers and their respective managers.

		•  The DBMS shall have a query that calculates the total number of incidents for each violation type. •  The DBMS shall have a query to list managers along with the number of drivers they supervise. •  The DBMS shall have a query to list drivers who have not had any incidents. •  The DBMS shall have a query that displays the number of incidents a driver has had along with their total mileage (performance metrics).
Forms	• Must have at least three forms with titles.	•  The DBMS shall have a form to enter and edit incident records in the Incidents table. •  The DBMS shall have a form to enter and edit driver records in the Drivers table. •  The DBMS shall have a form to enter and edit manager records in the Managers table. •  The DBMS shall have a navigation form that allows you to access all other forms and reports.
Reports	• Must have three reports.	•  The DBMS shall have a report that gives a summary of incidents by violation type. •  The DBMS shall have a report that lists drivers who have been involved in incidents along with the number of incidents and mileage for each driver (performance report). •  The DBMS shall have a report that displays all drivers listed under their respective manager.

Other

- Database must use at least five macros.
-  The DBMS shall have a macro that goes straight to a new record on the driver form.
-  The DBMS shall have a macro that goes straight to a new record on the incident form.
-  The DBMS shall have a macro that goes straight to a new record on the manager form.
-  The DBMS shall have a macro that closes all open objects and returns to the navigation form.
-  The DBMS shall have a macro that closes all open objects.
-  The DBMS shall have a macro that closes the database.
-  The DBMS shall have a macro that allows you to export all records from the incidents table to a file (Excel, text, PDF, etc.).
-  The DBMS shall have a macro that opens all forms (except for the navigation form).
-  The DBMS shall have a macro that opens all tables.
-  The DBMS shall have a macro that opens all reports in print preview.
-  The DBMS shall have a macro that opens the driver and manager contact info queries for viewing in read only mode.
-  The DBMS shall have a macro that opens the violation table for viewing in read only mode.
