

School Attendance Tracker

- **UI:** First screen summarizes the students with all of the fields in a datasheet format, user selects a record and clicks RECORD ATTENDANCE, which pulls them into a screen with student details, a date field, and the option to select present/not present and click submit.
- **Tables:** *Students* (student_id, name, grade), *Attendance* (attendance_id, student_id, date, status).
- **Functionality:** Track attendance and student information.

I've designed the UI for the two screens using Figma.

Screen 1 – School Attendance Tracker (Main Window)

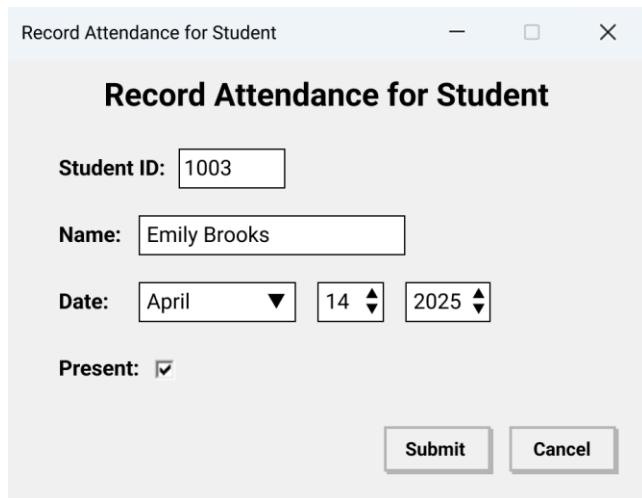

This main window displays a summary of all students in a class and their attendance status.

Widgets Used:

- **Table:** Displays all students in a structured format with columns: Student ID, Name, Grade, and Attendance (Present/Total Days). There will also be a scrollbar that allows you to scroll through the list if more students exist that don't fit on screen.
- **Button – “Record Attendance”:** Allows the user to select a student record and open the second window to record attendance for that student.
- **Button – “Exit”:** Closes the application.

Screen 2 – Record Attendance for Student

Record Attendance for Student

Record Attendance for Student

Student ID: 1003

Name: Emily Brooks

Date: April 14 2025

Present: ☒

Submit Cancel

This window is opened when the user clicks “Record Attendance” and is used to mark a student as present or absent for a selected date.

Widgets Used:

- **Label and Text Box – “Student ID”:** Displays the selected student’s ID. This field will be read-only to prevent editing.
- **Label and Text Box – “Name”:** Displays the selected student’s name. This field will also be read-only to prevent editing.
- **Dropdown – “Month”:** Allows the user to select the month (ex. January, February, March, etc.) from a list of options.
- **Spinbox – “Day”:** Lets the user choose the day of the month (1–31).
- **Spinbox – “Year”:** Allows the user to choose the year (ex. 2025).
- **Checkbox – “Present”:** A checkbox that the user checks if the student was present on the selected date; this will set the value for the status field.
- **Button – “Submit”:** Saves the attendance record to the database and returns to the main window.
- **Button – “Cancel”:** Cancels the attendance input and returns to the main window without saving changes.
